IGEL
Health Check

IGEL OS is the next-generation endpoint OS for cloud workspaces. It standardizes endpoints and provides for adaptive configuration and granular control while giving users a familiar, trouble-free workspace. Supporting a vast array of remote display protocols and peripherals, IGEL OS is purpose-built for enterprise access to virtual environments of all types. Built on a secure Linux distribution (small attack surface) that includes UEFI Secure Boot security standard (a chain of trust from the UEFI system to the OS) to fortify your enterprise against malware, it can run on any compatible 64-bit device to help protect your hardware investments.

Universal Management Suite (UMS) is a single management solution for up to tens of thousands of decentralized endpoints that can be easily managed. Built for security and ease of administration, the UMS features a drag-and-drop interface with policy-driven controls as well as RBAC (role-based access control) and APIs. The IGEL Cloud Gateway is an optional component that extends the reach of the UMS without requiring a VPN connection to ensure strong management and control of all software-defined endpoints, regardless of where they are located: in remote locations including home offices, remote campuses, or for mobile "road warrior" workers.

This IGEL Health Check will include the following high-level objectives:

This service includes a deep dive of your IGEL Unified Management Server (UMS) and all related components. As part of your health check, Choice Solutions will work with you to review the following components:

- UMS Supporting Infrastructure
- UMS Server and Database
- IGEL Device Management
- Firmware Management
- IGEL Device Lifecycle
- UMS Administration
- IGEL Best Practice Assurance
- Custom Partition
- Backup Solution
- OS12 Readiness
- Profile Management
- Device Licensing

Customer Benefits

Greater visibility: In-depth inventory and baseline of your IGEL environment and supported devices
Save time: A well designed and efficient IGEL environment to allow IT staff to spend less time administrating and more time innovating
Maximize investment: Full visibility of existing environment and recommendations for any license features
Drive long term strategy: Move with advances in technology to ensure efficiency, through modern workspace practices

At the end of the engagement, Choice Solutions will provide the following documentation:

- IGEL Health Check Findings

To summarize, as part of this customized engagement, Choice Solutions will do the following:

- Provide a finding document that is digestible for the customer to review current issues and next steps on remediation.
