
OVERVIEW

Adopting new infrastructure platforms often requires organizations to migrate existing workloads against tight timelines. Nutanix Move simplifies this process with infrastructure-level bulk VM migrations, removing the friction associated with onboarding new infrastructure, and enabling businesses to quickly leverage the full potential of Nutanix Enterprise Cloud, with near-zero VM or application service outage during migrations.

Nutanix Move automates “lift and shift” VM migrations and delivers the best practice configurations needed for optimal VM performance—saving significant time and cost. Automate the mundane and cumbersome steps required to manually migrate or rebuild VMs on an AHV environment.

OUR SERVICE OFFERING

NUTANIX MOVE FOR CROSS-HYPERVISOR MIGRATION:

- Post new AHV cluster build and validation, Choice Solutions will deploy a single Nutanix Move VM on the target cluster.
- Choice Solutions will go through limitations, specialized server role migration tips and other requirements.
- Choice Solutions will walk customer through defining a source environment and target cluster.
- Choice Solutions will create up to three migration plans.
- Choice Solutions will demonstrate and perform up to three cutovers for non-prod general server virtualization VMs (Specialized server roles such as domain controllers, SQL, Exchange, PKI, etc. are not included as part of these included plans for the base Choice Solutions Nutanix Move services.
- As part of test migrations, Choice Solutions will demonstrate Data Seeding and cutover scheduling.

Typically a half day engagement.
