

OVERVIEW

Adopting new infrastructure often requires organizations to migrate existing workloads within tight timelines. Nutanix Move simplifies this with infrastructure level bulk VM migrations, enabling businesses to quickly leverage their Nutanix investment. With near-zero VM or application service outage during migrations, this helps the business continue to move forward leveraging a true hybrid cloud solution.

Nutanix Move automates the process of VM migration and delivers best practice configuration for optimal VM performance. Whether you are moving from VMware to AHV, have workloads on Azure that need to move back to Nutanix on prem or Nutanix cloud clusters, Move removes the friction of migrating platforms making hybrid cloud a reality.

OUR SERVICE OFFERING

- Deploying single Nutanix Move appliance onto existing AHV cluster
- Review of migration requirements and recommendations
- Assistance on defining source and target environment within Move appliance
- Creation of up to three migration plans
- Demonstration of up to three cutovers leveraging non-production general purpose virtual servers
- Demonstration of data seeding and cutover scheduling as part of test migrations

This service will take approximately one day. If your needs for VM migrations are larger, talk to your account team about expanded service offerings.
